Key Benefits

- The bird bagger is a single, pneumatically driven machine to bag birds;
- bags are automatically opened by an air blower, while a funnel keeps the bags open, allowing for a smooth operation;
- including tape sealer to seal bags quick and easy, as well as a frame for waste disposal;
- a skilled operator can bag up to 500-800 birds per hour with a single machine;
- machine adjustable to various poultry sizes, different spoon sizes are available;
- the baggers are light-weight, can be folded in to create space or slided sideways for optimal positioning in front of various drop-off stations and are easy to clean;
- economical: uses just 10 (nominal) liters of air per bird. Other bagging machines require more air and thus a larger compressor;
- Easily expanded to a complete packing section, as multiple bagging machines can be installed on a sturdy stainless steel frame.
